Practical 11: Create a Table and Enter Records

Aim: To create a database table named STUDENT and enter student records.

Requirements: LibreOffice Base

Field Name	Field Type	Purpose
Admission_No	Integer	Unique admission number; set as Primary Key
Student_Name	Text (VARCHAR)	Name of the student
Class	Text (VARCHAR)	Class
Section	Text (VARCHAR)	Section
Marks	Integer	Marks obtained

Procedure:

1. Open LibreOffice Base and create a new database. Save it with a suitable name.
2. Under Tables, select **Create Table in Design View**.
3. Enter the field names and choose suitable field types from the table above.
4. Set **Admission_No** as the Primary Key by right-clicking its row and choosing Primary Key.
5. Save the table as **STUDENT**.
6. Open the table and enter at least five sample student records.

Output:

Table-Student

Admission_No	Student_Name	Class	Section	Marks
1001	Akshita	10	A	92
1002	Simran	10	A	92
1003	Ankit	10	B	93
1004	Siddharth	10	B	96
1005	Swetha	10	A	94

Result: The STUDENT table is created and populated with records.

Practical 12: Create an EMPLOYEE Table

Aim: To create an EMPLOYEE table using Design View with suitable field names and data types.

Requirements: LibreOffice Base.

Field Name	Field Type
Employee_ID	Integer (Primary Key)
Employee_Name	Text (VARCHAR)
Department	Text (VARCHAR)
Salary	Decimal
Date_of_Joining	Date

Procedure:

1. Create or open a database in LibreOffice Base.
2. Select **Tables** → **Create Table in Design View**.
3. Enter the fields and select the data types shown above.
4. Set **Employee_ID** as the Primary Key.
5. Save the table as **EMPLOYEE**.
6. Open the table and enter at least five sample employee records.

Output:

Table-Employee

Employee_ID	Employee_Name	Department	Salary	Date_of_Joining
101	Kavin	IT	40000	01/11/2026
102	Yashita	HR	45000	01/11/2026
103	Angel	IT	40000	01/11/2026
104	Pooja	Production	42000	01/11/2026
105	Shiyadat	Marketing	40000	01/11/2026

Result: The EMPLOYEE table was successfully created, and five employee records were entered

Practical 13: Create and Run a Query

Aim: To display students who scored more than 75 marks.

Requirements: A database containing the STUDENT table with sample records.

Procedure:

1. Open the database and select **Queries**.
2. Choose **Create Query in Design View** and add the STUDENT table.
3. Add the **Student_Name** and **Marks** fields to the query design grid.
4. In the Criteria row under the **Marks** field, type **>75**.
5. Run the query and check the results.
6. Save the query as **HIGH_SCORERS**.

Output: Query Result

Student_Name	Marks
Tanish	**91**
Ananya	**90**
Jahnavi	**93**

Result: The query displays only students whose marks are greater than 75.

Practical 14: Create a Form

Aim: To create a form for entering and viewing student details.

Requirements: A database containing the STUDENT table.

Procedure:

1. Open the database and select **Forms**.
2. Choose **Use Wizard to Create Form**.
3. Select the STUDENT table and move the required fields into the form.
4. Choose a suitable arrangement or layout.
5. Complete the wizard and save the form as **STUDENT_FORM**.
6. Open the form and use it to enter a new student record.

Output:

Student Form

Admission Number : 1006

Student Name : P Manoj

Class : 10

Section : C

Marks : 88

First	Previous	Next	Last
New Record			

Result: The STUDENT_FORM is created and can be used to enter or view student details.

Practical 15: Create a Report

Aim: To generate a report displaying student details.

Requirements: A database containing the STUDENT table and records.

Procedure:

1. Open the database and select **Reports**.
2. Choose **Use Wizard to Create Report**.
3. Select the STUDENT table and add the required fields.
4. Choose sorting options if needed, followed by a suitable layout.
5. Complete the wizard and save the report as **STUDENT_REPORT**.
6. Open the report and verify that the student details are displayed correctly.

Output: STUDENT_REPORT

Student Marks Report Class: 10				
Admn No	**Name**	**Class**	**Sec**	**Marks**
1001	**Asvanth**	**10**	**B**	**86**
1002	**Anjika**	**10**	**A**	**92**
1003	**Jeevan**	**10**	**A**	**94**
1004	**Sarvesh**	**10**	**B**	**85**

Result: The STUDENT_REPORT is generated and displays the student details.
