Session 2026-27

Class X Science Biology
Ch- Life Process
Previous Year CBSE Board Question Paper

CBSE BP 2025-26
(Set- 31/1/1- 31/5/1)
Section-A (one Marker Questions)

Q.1. Which structure in a leaf is mainly responsible for gaseous exchange? (Set -30/1/1)
(a) Xylem (b) Stomata (c) Phloem (d) Cuticle

Q.2. Pancreas secretes pancreatic juice which contain certain enzyme that helps in digestion of food. (Set -30/1/1)
Choose the correct option from the following:
(a) Trypsin digests emulsified fats and lipase digests proteins.
(b) Trypsin digests proteins and lipase digest emulsified fats.
(c) Trypsin and lipase both digests' fats.
(d) Trypsin digests proteins and lipase digests carbohydrates.

Q.3. **Assertion (A):** In human beings, the respiratory pigment is haemoglobin present in red blood cells. (Set -30/1/1)
Reason (R): Haemoglobin has a very high affinity for carbon dioxide.

Q.4. The carbohydrates, which are not used immediately in plants, are stored in the form of 'a', which serves as an internal energy reserve. What does 'a' stand for? (Set -30/2/1)
(a) Starch (b) Sugar (c) Fat (d) Protein

Q.5. The following events occur during the process of photosynthesis. Choose the option that indicates the correct events. (Set -30/2/1)
(i) Oxidation of carbon dioxide to carbohydrates
(ii) Conversion of light energy into chemical energy
(iii) Absorption of light energy by chlorophyll
(iv) Conversion of hydrogen and oxygen into water
Options:
(a) (i) and (ii) (b) (ii) and (iii)
(c) (iii) and (iv) (d) (i) and (iv)

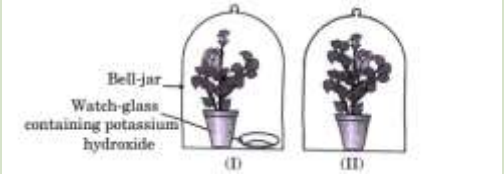

Q.6. **Assertion (A) :** Blood plasma transports carbon dioxide in dissolved form, while oxygen is transported by respiratory pigments. (Set -30/2/1)
Reason (R): Carbon dioxide is more soluble in water than in oxygen.

Q.7. Pravin was given a list of characteristics associated with the process of anaerobic respiration in humans, in the table given below : (Set -30/3/1)

	Location	Condition	End Product
Characteristic	(i) Muscle Cell	(ii) Requires presence of Oxygen (O_2) and Carbon dioxide (CO_2)	(iii) 3-Carbon molecules

Which of the above characteristics is/are related to the above process ?
(a) (i) and (ii) (b) (i) and (iii) (c) (ii) and (iii) (d) (i) only

Q.8. Observe the figure given below and identify the incorrect step for the activity set-up: (Set -30/3/1)

(a) Both plants are kept in the dark room for three days before placing them in separate glass jars.
(b) Both plants are covered with separate wooden bell-jars.
(c) Use Vaseline to seal the bottom of the jars with the glass plates.
(d) Both potted plants were kept in sunlight for a few hours before the iodine test for the presence of starch.

Q.9. **Assertion (A):** The basic filtration unit in the kidneys, like in the lungs, is a cluster of very thin-walled blood capillaries. (Set -30/3/1)
Reason (R): Each capillary cluster in the kidney is associated with the cup-shaped end of a coiled tube called Bowman's capsule.

Q.10. In human beings the oxygen rich blood is pumped out to the body by: (Set -30/4/1)
(a) contraction of right atrium (b) relaxation of left ventricle
(c) contraction of right ventricle (d) contraction of left ventricle

Q.11. Choose the equation of reaction that correctly represents anaerobic respiration in muscles:
(a) $\text{Glucose} \rightarrow \text{Pyruvate} \xrightarrow[\text{of } O_2]{\text{Absence}} \text{Ethanol} + CO_2 + \text{Energy}$ (Set -30/5/1)
(b) $\text{Glucose} \xrightarrow{O_2} \text{Pyruvate} \xrightarrow{O_2} \text{Energy}$
(c) $\text{Glucose} \xrightarrow{O_2} \text{Pyruvate} \xrightarrow[\text{oxygen}]{\text{Lack of}} \text{Ethanol} + \text{Energy}$
(d) $\text{Glucose} \rightarrow \text{Pyruvate} \xrightarrow[\text{oxygen}]{\text{Lack of}} \text{Lactic acid} + \text{Energy}$

Q.12. **Assertion (A):** The peristaltic movements occur all along the gut.
Reason (R) : The lining of the gut has muscles that contract rhythmically to push the food in regulated manner. (Set -30/5/1)

Section-B (two Marker Questions)

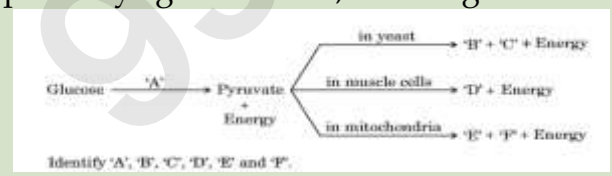

Q.13. Give differences between the following: (Set -30/1/1)
(a) Nephron and neuron

Section-C (three Marker Questions)

Q.14. What is the function of diaphragm in human respiratory system? Where is it present in human body? (Set -30/1/1)

Q.15. State two differences between the act of chewing food and salivation on sight of food (Set -30/1/1)

Q.16. Complete the pathways given below, showing the breakdown of glucose. (Set -30/2/1)

Identify 'A', 'B', 'C', 'D', 'E' and 'F'.

Q.17. What kind of respiration provides more energy and why? (Set -30/3/1)

Q.18. Separation of right side and left side of the heart is useful to keep oxygenated and deoxygenated blood from mixing. Various organisms have different types of heart.
(I) Fill in the blanks (i) to (iii) correctly according to the type of organisms and their evolution in terms of blood circulation :

Organisms	Number of chambers in heart	Type of blood being circulated	Type of circulation
Fish	(i) _____	Mixed	Single
(ii) _____	3-chambered	Mixed	Incomplete double circulation
Birds and Mammals	4-chambered	Separated circulation path of oxygenated and deoxygenated blood	(iii) _____

(II) Which type of circulation is most efficient? (Set -30/3/1)

Q.19. Give a diagrammatic representation of nutrition in Amoeba. (Set -30/5/1)

Q.20. Briefly mention the steps in double-circulation through human heart. (Set -30/5/1)

Section-E (five Marker Questions)

Q.21. (a) Draw a labelled diagram showing open and closed stomatal pore. (Set -30/5/1)

(b) List the main events that occur during the process of photo-synthesis.

(c) Write a balanced chemical equation showing photo-synthesis in plants.

OR

(a) Draw a well-labelled diagram of nephron and label atleast 4 of its parts.

(b) Write the role of capillary cluster inside Bowman's capsule.

(c) What is meant by selective reabsorption?

Q.22. Kidneys help to regulate the volume of fluid and various metabolites waste products in the body. (Set -30/5/1)

Normally, kidney filter about 180 L of fluid daily but the volume actually excreted out is only a litre or two a day.

Patients with kidney failures can be saved by dialysis and kidney transplant.

(a) Write the structure and function of Bowman's capsule.

(b) Although kidneys filter a large amount (about 180 L daily) of fluids, still the excretion from the body is only about a litre or two. Why?

(c) What is excretion? Why is it necessary for any living organism?

OR

(c) State two similarities between lungs and kidneys.

Hunny Gupta 9999903256

CBSE BP 2024-25

Section-A (one Marker Questions)

Q.23. Secretion of less saliva in mouth will effect the conversion of: (Set -30/1/1)

(a) proteins into amino acids (b) fats into fatty acids and glycerol
(c) starch into simple sugars (d) sugars into alcohol

Q.24. The breakdown of glucose has taken the following pathway: (Set -30/1/1)

$$\text{Glucose} \xrightarrow{(a)} \text{Pyruvate + Energy} \xrightarrow{(b)} \text{Lactic acid + Energy}$$

The sites 'a' and 'b' respectively are:

(a) Mitochondria and Oxygen deficient muscle cells
(b) Cytoplasm and Oxygen rich muscle cells
(c) Cytoplasm and Yeast cells
(d) Cytoplasm and Oxygen deficient muscle cells

Q.25. The opening and closing of stomata is regulated by: (Set -30/2/1)

(a) CO_2 concentration in stomata (b) Temperature in guard cells
(c) O_2 concentration in stomata (d) Amount of water in guard cells

Q.26. One-cell thick blood vessels are known as: (Set -30/2/1)

(a) Alveoli (b) Capillaries (c) Arteries (d) Veins

Q.27. The gastric glands present in the wall of the stomach release: (Set -30/3/1)

(a) Mucus and Trypsin (b) Pepsin and Trypsin
(c) Mucus and Pepsin (d) Pepsin and Salivary amylase

Q.28. Select from the following a hydrocarbon having one C-C bond and one $C \equiv C$ bond: (Set -30/4/1)

(a) Benzene (b) Cyclohexane (c) Butyne (d) Propyne

Q.29. The essential element taken up from the soil by the plants to synthesize proteins is: (Set -30/4/1)

(a) Phosphorus (b) Nitrogen (c) Iron (d) Magnesium

Q.30. Plants like rose and banana have lost the capacity to produce: (Set -30/4/1)

(a) flowers (b) buds (c) seeds (d) fruits

Q.31. **Assertion (A):** In large animals, oxygen can reach different parts of the animal's body easily.
Reason (R): Respiratory pigments take up oxygen from the air and carry it to body tissues. (Set -30/4/1)

Q.32. Listed below are the steps of nutrition in Amoeba. Select the correct sequence of these steps:

(i) Diffusion of simple nutrients into cytoplasm (Set -30/5/1)
(ii) Food vacuole formation
(iii) Formation of finger like temporary extensions of cell surface
(iv) Complex substances broken to simpler ones
(v) Undigested material thrown out of the cell surface

(A) (iv), (i), (ii), (iii), (v) (B) (iii), (ii), (iv), (i), (v)
(C) (ii), (i), (iv), (v), (iii) (D) (iii), (iv), (i), (ii), (v)

Q.33. In aerobic respiration, the steps are breakdown of glucose to pyruvate and its further conversion to carbon dioxide. Both processes respectively occur in (Set -30/5/1)

(a) Vacuole and Cytoplasm (b) Chloroplast and Mitochondria
(c) Mitochondria and Cytoplasm (d) Cytoplasm and Mitochondria

Q.34. The basic filtration unit of the excretory system in human beings is: (Set -30/6/1)

(a) Nephron (b) Urethra (c) Neuron (d) Urinary bladder

Hunny Gupta 9999903256

Q.35. In human alimentary canal, the digestive juice secreted by the gastric glands are
(a) Bile, Trypsin, Pepsin (b) Hydrochloric acid, Pepsin, Mucus
(c) Lipase, Bile, Mucus (d) Salivary amylase, Pepsin, Bile (Set -30/6/1)

Q.36. **Assertion (A):** Xylem tissue moves water and minerals obtained from the soil by the roots.
Reason (R): Xylem tissue is found only in the roots of a plant (Set -30/6/1)

Section-B (two Marker Questions)

Q.37. Besides minimising the loss of blood, why is it essential to plug any leak in a blood vessel? Name the component of blood which helps in this process and state how this component performs this function. (Set -30/1/1)

OR

(i) The transport system in plants is relatively slower than in animals. Give reasons.
(ii) State the role of phloem in the transport of materials in plants.

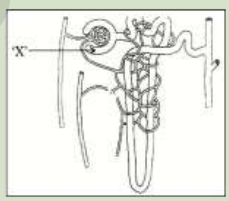

Q.38. State the main function of veins in human circulatory system. Why do they not need thick walls? (Set -30/3/1)

Q.39. "Plants use a variety of techniques to get rid of waste material." Justify this statement giving any four ways (Set -30/4/1)

Q.40. (A) How is lymph formed? State its important function. (Set -30/5/1)

OR

(B) (a) Identify 'X' in the figure of human nephron shown below. What role does it play in the process of urine formation?

(b) Why some substances are selectively reabsorbed from the initial filtrate of urine, as it flows along the tabular part of nephron

Section-C (three Marker Questions)

Q.41. On the basis of the characteristics of the processes given in the brackets in each case, differentiate between the following: (Set -30/3/1)
(a) Products of breakdown of pyruvate in aerobic and anaerobic respiration in human beings (product(s) of the processes)
(b) Respiration and photosynthesis in plants (gas released)
(c) Respiration in terrestrial animals and fishes (organs involved)

Q.42. The digestion of food in human alimentary canal is a complex process. State the enzyme/salt present in the following and mention their function in the process of digestion:
(i) Saliva (ii) Bile Juice (iii) Pancreatic Juice (Set -30/4/1)

Q.43. (a) Write the name and one function of respiratory pigment found in human beings.
(b) Why do lungs always contain a residual volume of air? (Set -30/5/1)
(c) Why is ATP known as energy currency of the living beings?

Q.44. Name the blood vessel that brings (i) oxygenated blood (ii) deoxygenated blood, to the human heart. Also name that chamber of the heart which receives deoxygenated blood and state how deoxygenated blood from this chamber is sent to lungs for oxygenation. (Set -30/6/1)

Section-D (four Marker Questions)

Q.45. (i) "The length of the small intestine in various animals depends on the food they eat." Justify the statement. (Set -30/2/1)
(ii) Discuss the role of the pancreas and bile juice in the digestion of food in human beings.

Hunny Gupta 9999903256

(iii) How is the small intestine designed to absorb digested food?

OR

(i) State the role of rings of cartilage present in the throat.

(ii) Discuss the role of the ribs and diaphragm when air is taken in during the breathing cycle.

(iii) Why do we get muscle cramps during heavy exercise? Explain

Section-E (five Marker Questions)

Q.46. In our homes, we receive the supply of electric power through a main supply also called mains, either supported through overhead electric poles or by underground cables. In our country the potential difference between the two wires (live wire and neutral wire) of this supply is 220 V. (Set -30/1/1)

(a) Write the colours of the insulation covers of the line wires through which supply comes to our homes.

(b) What should be the current rating of the electric circuit (220 V) so that an electric iron of 1 kW power rating can be operated?

(c) (i) What is the function of the earth wire? State the advantage of the earth wire in domestic electric appliances such as electric iron.

OR

(c) (ii) List two precautions to be taken to avoid electrical accidents. State how these precautions prevent possible damage to the circuit/appliance

Hunny Gupta 9999903256

Section-A (one Marker Questions)

Q.47. A stomata closes when: (Set -30/1/1)

(i) it needs carbon dioxide for photosynthesis.
(ii) it does not need carbon dioxide for photosynthesis.
(iii) water flows out of the guard cells.
(iv) water flows into the guard cells.

The correct reason(s) in this process is/are:

(a) (i) only (b) (i) and (iii)
(c) (ii) and (iii) (d) (ii) and (iv)

Q.48. **Assertion (A):** The rate of breathing in aquatic organisms is much faster than in terrestrial organisms. (Set -30/1/1)

Reason (R): The amount of oxygen dissolved in water is very high as compared to the amount of oxygen in air.

Q.49. Which of the following statement(s) is (are) true about human heart? (Set -30/2/1)

(a) Right atrium receives oxygenated blood from lungs through pulmonary artery.
(b) Left atrium transfers oxygenated blood to left ventricle which sends it to various parts of the body.
(c) Right atrium receives deoxygenated blood through vena cava from upper and lower body.
(d) Left atrium transfers oxygenated blood to aorta which sends it to different parts of the body.

(a) (a) (b) (a) and (d) (c) (b) and (c) (d) (b) and (d)

Q.50. In human respiratory system, when a person breathes in, the position of ribs and diaphragm will be : (Set -30/2/1)

(a) lifted ribs and curve/dome shaped diaphragm.
(b) lifted ribs and flattened diaphragm.
(c) relaxed ribs and flattened diaphragm.
(d) relaxed ribs and curve/dome shaped diaphragm.

Q.51. Which of the following statement (s) is (are) true about human heart? (Set -30/3/1)

(a) Right atrium receives oxygenated blood from lungs through pulmonary artery.
(b) Left atrium transfers oxygenated blood to left ventricle which sends it to various parts of the body.
(c) Right atrium receives deoxygenated blood from different parts of the body through vena cava.
(d) Left atrium transfers oxygenated blood to aorta which sends it to different parts of the body.

(a) (b) only (b) (a) and (d) (c) (b) and (c) (d) (b) and (d)

Q.52. In human beings, when the process of digestion is completed, the (i) proteins, (ii) carbohydrates, and (iii) fats are respectively finally converted into : (Set -30/4/1)

(A) (i) Amino acids, (ii) glucose and (iii) fatty acids
(B) (i) Amino acids, (ii) glucose, (iii) fatty acids and glycerol
(C) (i) Glucose, (ii) fatty acids and glycerol, (iii) amino acids
(D) (i) Sugars, (ii) amino acids, (iii) fatty acids and glycerol

Hunny Gupta 9999903256

Q.53. **Assertion (A) :** In the human heart ventricles have thicker muscular walls than atria.
Reason (R) : Ventricles have to pump the blood into various organs. (Set -30/4/1)

Q.54. **Assertion (A) :** Oxygen is essential for all aerobic forms of life.
Reason (R) : Free oxygen atoms combine with molecular oxygen to form ozone.
(Set -30/4/1)

Q.55. The process in which transport of soluble products of photosynthesis takes place in plants is known as : (Set -30/5/1)

(A) Transpiration (B) Evaporation
(C) Conduction (D) Translocation

Section-B (two Marker Questions)

Q.56. State one role of each of the following in human digestive system: (Set -30/1/1)

(i) Hydrochloric acid (ii) Villi
(iii) Anal Sphincter (iv) Lipase

Q.57. Photosynthesis takes place in the leaves and the food prepared by it reaches other parts of the plants. Name the process involved and explain it. (Set -30/2/1)

Q.58. (a) We need to water the soil in plants on a regular basis. But it ultimately reaches the leaves of the plant. Explain how this takes place. (Set -30/4/1)

OR

(b) Name the type of nutrition exhibited by Amoeba. Explain how food

Q.59. (a) Sometimes while running, the athletes suffer from muscle cramps. Why? How is The respiration in this case different from aerobic respiration ? (Set -30/5/1)

OR

(b) Write the other name given to lymph. State its two functions

Section-C (three Marker Questions)

Q.60. (i) Why is respiratory pigment needed in multicellular organisms with large body size?
(ii) Give reasons for the following: (Set -30/1/1)
(a) Rings of cartilage are present in the throat.
(b) Lungs always contain a residual volume of air.
(c) The diaphragm flattens and ribs are lifted up when we breathe in.
(d) Walls of alveoli contain an extensive network of blood vessels.

Q.61. (i) Why is respiratory pigment needed in multicellular organisms with large body size?
(ii) Give reasons for the following: (Set -30/2/1)
(a) Rings of cartilage are present in the throat.
(b) Lungs always contain a residual volume of air.
(c) The diaphragm flattens and ribs are lifted up when we breathe in.
(d) Walls of alveoli contain an extensive network of blood vessels.

Q.62. We water the soil but it reaches the topmost leaves of the plants. Explain in brief the process involved. (Set -30/3/1)

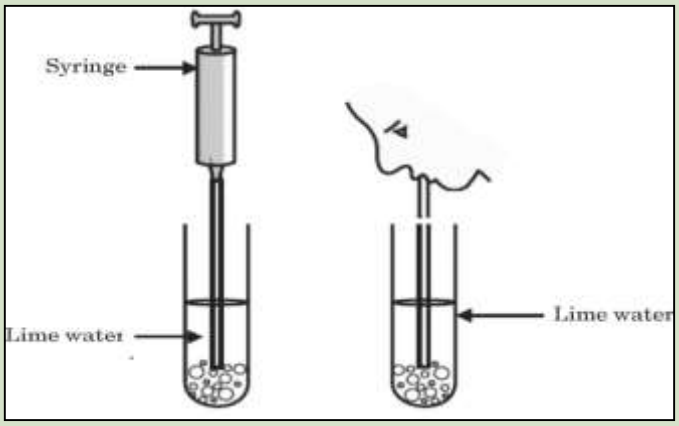

Section-D (four Marker Questions)

Q.63. (a) Design an experiment to demonstrate that carbon dioxide is essential for photosynthesis. Write the observation and conclusion of the experiment.

OR

Hunny Gupta 9999903256

(b) (i)

In the experimental set-up shown above in diagram (I) atmospheric air is being passed into lime water with a syringe while in diagram (II) air is being exhaled into lime water. The time taken for the lime water to turn milky in both the test tubes is different. Give reason. (Set -30/5/1)

(ii) Draw the diagram of an open stomatal pore and label (I) Guard cells, and (II) Chloroplast on it. Mention two functions performed by stomata.

Section-E (five Marker Questions)

Q.64. Kidneys are vital organs for survival. Several factors like infections, injury or restricted blood flow to kidneys reduce the activity of kidneys. This leads to accumulation of poisonous wastes in the body, which can even lead to death. In case of kidney failure, an artificial kidney can be used. An artificial kidney is a device to remove waste products from the blood through dialysis. (Set -30/4/1)

(a) (i) Name the artery that brings oxygenated blood to the kidney.

(ii) Name the cluster the thin-walled blood capillaries present in

(b) In human excretory system name the organ which stores urine. Is this organ under hormonal control or nervous control?

(c) (i) List two major steps involved in the formation of urine and state in brief their functions.

(ii) In which part of the nephron does selective reabsorption take place ? List the factors which the amount of water reabsorbed depends on.

Hunny Gupta 9999003256

CBSE BP 2022-23

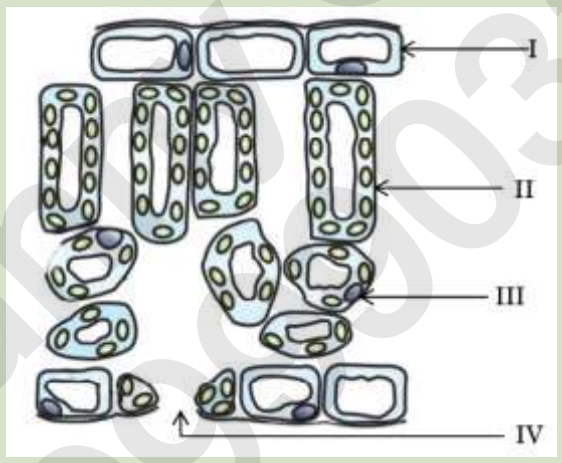

Section-A (one Marker Questions)

Q.65. An organism which breaks down the food material outside the body and then absorbs it is
(a) a plant parasite, Cuscuta (b) an animal parasite, Tapeworm
(c) a bacteria, Rhizobium (d) a fungi, Rhizopus (Set -30/1/1)

Q.66. Consider the following statements about small intestine and select the one which is NOT correct: (Set -30/1/1)
(a) The length of the small intestine in animals differs as it depends on the type of food they eat.
(b) The small intestine is the site of complete digestion of food.
(c) The small intestine receives secretions from liver and pancreas.
(d) The villi of the small intestine absorb water from the unabsorbed food before it gets removed from the body via the anus.

Q.67. Sphincter muscles are present at the exit of: (Set -30/2/1)
(a) Stomach and small intestine (b) Stomach and anus
(c) Small intestine and large intestine (d) Oesophagus and stomach

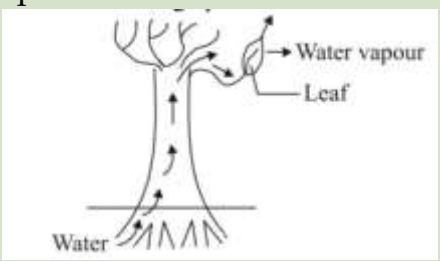

Q.68. In the following diagram, identify the cells through which massive amounts of gaseous exchange takes place for photosynthesis: (Set -30/2/1)

(a) I (b) IV (c) III (d) II

Q.69. During vigorous exercise, the occurrence of cramps in the outer muscles of an athlete is due to the conversion of pyruvate to: (Set -30/2/1)
(a) Glucose (b) Ethanol (c) Lactic acid (d) Lactose

Q.70. Observe the following diagram and identify the process and its significance from the following options: (Set -30/4/1)

(a) Evaporation: maintains water contents in leaf cells.
(b) Transpiration: creates a suction force which pulls water inside the plant.
(c) Excretion helps in excreting out waste water from the plant.
(d) Translocation helps in transporting materials from one cell to another.

Q.71. Opening and closing of stomata is due to: (Set -30/4/1)
(a) High pressure of gases inside the cells.
(b) Movement of water in and out of the guard cells.
(c) Stimulus of light in the guard cells.
(d) Diffusion of CO_2 in and out of the guard cells.

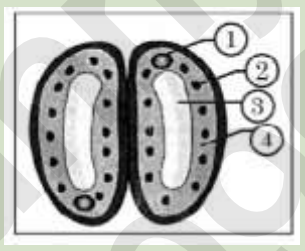

Q.72. Assertion (A): The inner walls of the small intestine have finger like projections called villi which are rich in blood. (Set -30/4/1)
Reason (R) These villi have a large surface area to help the small intestine in completing the digestion of food.

Q.73. The process in which loss of water in the form of vapours from the aerial parts of plants takes place is X, which helps in Y. Here X and Y respectively are: (Set -30/5/1)
(a) Transpiration and photosynthesis. (b) Transpiration and temperature regulation.
(c) Translocation and movement of soluble products of photosynthesis in phloem.
(d) Translocation and absorption of water and minerals from soil by roots.

Q.74. As compared to terrestrial organisms, the rate of breathing in aquatic organisms is:
(a) Faster because they need more oxygen for their survival. (Set -30/5/1)
(b) Faster because the amount of dissolved oxygen in water is fairly low.
(c) Slower because the amount of dissolved oxygen in water is fairly low.
(d) Slower because the capacity of water of dissolving atmospheric air is limited

Q.75. Assertion (A): The walls of atria are thicker than those of the ventricles. (Set -30/5/1)
Reason (R): Ventricles have to pump blood into various organs at high pressure

Q.76. In the given diagram of a closed stomata: (1), (2), (3) and (4) respectively are (Set -30/6/1)

(a) nucleus, chloroplast, guard cell, vacuole
(b) nucleus, chloroplast,, vacuole, guard cell
(c) chloroplast, nucleus, vacuole, guard cell
(d) vacuole, guard cell, nucleus, chloroplast

Q.77. **Assertion (A):** Amoeba takes in food using finger like extensions of the cell surface.
Reason (R): In all unicellular organisms, the food is taken in by the entire cell surface.
(Set -30/6/1)

Section-B (two Marker Questions)

Q.78. (a) Name the type of blood (oxygenated/ deoxygenated) transported by each of the following mentioning the path (i.e. from one organ (which place) to another (which place). (Set -30/1/1)
(i) Vena cava (ii) Pulmonary artery

OR

(b) With the help of a schematic flow chart, show the breakdown of glucose in a cell to provide energy-
(i) in the presence of oxygen (ii) in lack of oxygen

Q.79. Name the part of the human excretory system where nephrons are found. Write the structure and function of nephrons. (Set -30/1/1)

Q.80. (a) Why is it important to prevent oxygenated and deoxygenated blood from mixing in birds and mammals? (Set -30/2/1)

(b) Which animals can tolerate some mixing of the oxygenated and deoxygenated blood streams? On what factor does the body temperature of these animals depend?

Q.81. Write one specific function each of the following organs in relation with excretion in human beings: (Set -30/4/1)

(i) Renal Artery (ii) Urethra

(iii) Glomerulus (iv) Tubular part of nephron

Q.82. Two green plants are kept separately in oxygen free containers, one in the dark and other in sunlight. It was observed that plant kept in dark could not survive longer. Give reason for this observation. (Set -30/4/1)

Q.83. In the process of digestion of food in human beings, two protein-digesting enzymes are secreted. Name the enzymes along with the glands that secrete them. (Set -30/5/1)

Q.84. Give the name of the enzyme present in the fluid in our mouth cavity. State the gland which produces it. What would happen to the digestion process if this gland stops secreting this enzyme? (Set -30/6/1)

Section-C (three Marker Questions)

Q.85. (a) (i) State the role of ATP in cellular respiration. (Set -30/1/1)

(ii) What ensures sufficient exchange of gases in plants?

(iii) State the conditions on which the direction of diffusion of gases in plant depend upon.

OR

(b) (i) What is the internal energy reserve in plants and animals?

(ii) How desert plants perform photosynthesis if their stomata remain closed during the day?

Q.86. (a) (i) what is the first step in the breakdown of glucose during aerobic and anaerobic respiration? Where does it take place? (Set -30/2/1)

(ii) ATP is called the energy currency of the cell. Why?

(iii) What is meant by "residual volume of air" in a breathing cycle?

OR

(b) Write in sequence the steps for experimental verification of the fact that "sunlight is essential for photosynthesis".

Q.87. (A) (i) How does Paramecium obtain its food? (Set -30/4/1)

(ii) List the role of each of the following in our digestive system:

(a) Hydrochloric acid (b) Trypsin

(c) Muscular walls of stomach (d) salivary amylase

OR

(B) (i) What is double circulation?

(ii) Why is the separation of the right side and the left side of the heart useful? How does it help birds and mammals?

Hunny Gupta 9999903256

Q.88. (a) With the help of an activity, explain the action of saliva on the food we eat.

(b) Why is bile juice important in the process of digestion ? (Set -30/5/1)

Q.89. Explain the process of transport of oxygenated and deoxygenated blood in a human body. (Set -30/6/1)

Hunny Gupta 9999903256
